Names for the Rock Raider Models from LEGO SYSTEM Underground

We have now settled with one set of American/English names for the models launched in the Rock Raiders universe 1999. The names are the “official” product names and will be used in the CD game from LEGO Media International, on the American boxes and should at least be used in all material using English language.

As the material is “crossing” borders it is very important that we keep consistency and are using the same names for a given product. Sales companies may need to translate the names into their local language. In that case attention should be drawn to the fact that other markets may use the same language and therefore there need to be some co-ordination as the CD-game only can use one name.

The “official” English names are:

#4910	The Hover Scout
#4920	The Rapid Rider
#4930	The Rock Raiders
#4940	The Granite Grinder
#4950	The Loader-dozer
#4970	The Chrome Crusher
#4980	The Tunnel Transport
#4990	The Rock Raiders HQ

On the American boxes the names will be translated into French and Spanish.

We are soon publishing the Rock Raiders “Universe Description” including the English names as well as names for the figures as they are proposed from GSM and LEGO Media. The names might change within the next weeks and I will keep you informed through a Newsletter.

Best Regards
